

I am an international structural engineer, currently involved in developing the technology for single family homes that will survive tornadoes, hurricanes, earthquakes and firestorms.

I first met Dorene Matney when I was a student in her class at Sierra College in Roseville. She taught me quite a bit, but since I was involved in so many different tasks, I could not keep up with the changes and still do other projects. Accordingly, I turned to Dorene to handle my website matters. She has done a great job, not only in getting it done, but in assuring that I understood what was going on. I am now in the process of using her services again for a new website about building houses to stand up to tornadoes. She is quick to respond, does the work quickly, gives me suggestions and ideas, and gets it right. She will do all of my work in the future, even though I am not a big client.
